# Creating an HPV Awareness Event for Adolescents...Lessons Learned

## Learning Objectives

- Create effective marketing material directed towards adolescents
- Create evaluations that measure success and potential improvement for future events
- Identify effective ways to engage adolescents in HPV awareness conversations

## Summary

January 2019 Forest Grove's Student Health Advisory Committee (SHAC) hosted a Health Summit at the Forest Grove High School. The event included two mini workshops for teens, STI Prevention and Healthy Youth Relationships, and opened to the public, they screened the film "Someone You Love: The HPV Epidemic" along with a Q & A with a panel of experts from around Washington County. While the event was impactful, there were obstacles along the way. This presentation will describe the planning process, what worked and what could be improved in the future, how school climate effects youth events, and how the content made an impact on the students directly.
