

Screening won't protect your patients from most cancer caused by HPV infection.
HPV VACCINATION FOR BOYS & GIRLS AT AGES 11-12 CAN.

CERVICAL CANCER

Just the tip of the iceberg.

Even with screening, in the United States
13,000 women are diagnosed with
 cervical cancer each year.

Based on: Viers et al. MMWR 2016; 65 (26). <https://www.cdc.gov/cancer/hpv/statistics>

Cervical cancer is the only type of HPV cancer for which there is a recommended screening test.

CERVICAL PRECANCERS

Screening can detect cervical precancers, which may require additional invasive testing and treatment. HPV vaccination can prevent most of this.

Sources: Jaura EA, et al. Cancer Epidemiol Biomarkers Prev. 2014 Oct;23(10):1997-2008. Guan P, et al. Int J Cancer. 2012 Nov 15;131(10):2349-29.

CASES EVERY YEAR

~216,000 HIGH GRADE
 CERVICAL LESIONS
~468,700 LOW GRADE
 CERVICAL PRECANCERS

OTHER HPV CANCERS

Recommended cancer screening tests are not available yet for other cancers caused by HPV infection.

CASES EVERY YEAR

700 PENILE CANCER
3,100 VULVAR & VAGINAL CANCER
5,500 ANAL / RECTAL CANCER
11,600 OROPHARYNGEAL CANCER

Based on: Viers et al. MMWR 2016; 65 (26). <https://www.cdc.gov/cancer/hpv/statistics>

OVER 90%
 of cancers caused by HPV are
 preventable through HPV vaccination

Don't rely on screening to catch it later.
 Protect them now with HPV vaccination.
